Biodynamically raised wine

Organically raised wine

The wine in this menu is listed lightest to heaviest within each section. When listing each wine we try to account for the perception of sweetness, acidity and tannins, upbringing techniques and age. While this is by no means a science we do hope it acts as a bit of a guide.

Please enjoy!

words

Farmers take great pride in their harvest and they are quite vocal on which techniques garnish the best product, be it a prize winning squash or Napa Valley Cabernet Sauvignon. In the wine world there are advocates for all sides of farming, but none so divided as between those who use chemicals and those who do not. There are advocates such as Claude Paupin of Pierre Bise that believe modern chemical treatments stymie the growth of root systems and prevent the vine from obtaining a natural balance within their microclimates. Paupin and many others feel Organic and Biodynamic farming allow the vines to coalesce more efficiently with their environment, allowing for a purer wine expression. Give this debate to Stu Smith of Smith-Madrone or Doug Shafer of Shafer Vineyards and they'll rightfully defend the responsible use of modern farming techniques, chemicals included. We purchase wine at Cilantro regardless of its farming origin, we buy based on quality. We admire the preservation of nature, and the less chemicals in the ground, the better. However, a large number of the world's greatest wines are made with some chemical intervention from responsible farmers who take care not to harm what they sow. Our goal with listing the differences in farming practices is to simply allow for more awareness and to offer our guests a choice, if you would like.

organic

A system of grape-growing broadly defined as shunning man-made (industrially synthesized) compounds such as fertilizers, fungicides, and pesticides, as well as anything that has been genetically modified. It contrasts with 'conventional', sometimes even called 'industrialized' or 'chemical' viticulture, by utilizing naturally occurring substances.

biodynamic

Biodynamic farming is based on theories expounded in the 1920s by the Austrian philosopher Rudolf Steiner (1861–1925) for agriculture in general. Biodynamics sees each vineyard as a living organism which can be maintained in a self-sustaining way. The Earth is also seen as a living organism with diurnal and seasonal rhythms dependent on, and receptive to, cosmic cycles. Agricultural work is timed to coincide with these rhythms and biodynamic spray and compost preparations are used, at specified times, on the land or directly on the crops, to heighten their potentially beneficial effects.
